DANIEL MIRIAM
PRIMARY EXAMINER

The response received on 2/3/06 has been placed in the file and was considered by the examiner. An action on the merits follows.

Allowable Subject Matter

Claims 47-56 (Re-numbered as 1-10) are allowed.

The following is an examiner's statement of reasons for allowance:

Liu discloses a system that allows a first spatial distribution and a second spatial distribution to be combined to create a new third spatial distribution. The purpose of the mathematical equation is to improve the method of images quality from a MRI machine. By combine the two spatial distribution, this allows the image to contain two different region information.

Liu does not discloses the method of having a first spatial distribution and a second spatial distribution having data points that both fall into same domain range, and re-sampling of data points from the first spatial distribution onto the second spatial distribution without generating artifacts in the data. In addition, Liu does not teach, the re-sampled data (i.e. new spatial distribution) must be within the original domain range of the first and second spatial distribution, and, finally, changing the domain range after the re-sampling is complete to create a new domain range. It is for all of the above-identified reasons, and in combination with all of the other elements that claims 47-56 (Re-number as 1-10) are allowable over the closest prior art of Liu.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclose.

1. Lu (U.S. Patent Number 5720708) disclosed high frame rate imaging with limited diffraction beams.
2. Ohhashi (U.S. Patent Number 5524130) disclosed computed tomography apparatus.
3. Swerdloff (U.S. Patent Number 5483567) disclosed computerized method for converting polar tomographic data to a cartesian image format.
